

Sample Data Usage Folder

Purpose

The Sample Data Folder contains example support tickets used to test and validate the AI Auto Categorization Webhook system. It helps demonstrate how the application processes incoming support requests and generates structured classification outputs.

Contents

Input Files

The input files contain support tickets with:

- Ticket ID
- Title
- Description

	A	B	C	D	E	F	G	H
1	timestamp	ticket_id	category	priority	confidence			
2	#####	T-2004	Technical	Medium	95%			
3	#####	T-2004	Technical	Medium	95%			
4	#####	T-1005	Technical	Medium	95%			
5								
6								
7								
8								
9

TEST CASE

Purpose

Test cases are designed to verify that the API endpoints and classification workflow operate correctly under normal conditions.

The project uses Pytest for automated testing.

Health Endpoint Test

The Health API test ensures that the service is running properly and returns system information.

Validation

- API responds successfully.
- Status code is 200.
- Service health status is returned.

The screenshot shows a web application running on localhost:8501. The interface is divided into two main sections. The top section, titled 'System Status', contains four cards: 'Status' (Healthy, Online), 'Model' (gpt-4o), 'Examples Loaded' (8), and 'Version' (1.0.0). The bottom section, titled 'Ticket Submission Form', contains three input fields: 'Ticket ID*' (T-2004), 'Title*' (amount transfer issues), and 'Description*' (I need a refund). A 'Classify Ticket' button is located at the bottom of the form.

System Status	Model	Examples Loaded	Version
Status: Healthy ↑ Online	gpt-4o	8	1.0.0

Ticket Submission Form

Ticket ID*
T-2004

Title*
amount transfer issues

Description*
I need a refund

Classify Ticket

Conclusion

The AI Auto Categorization Webhook successfully automates support ticket classification using Large Language Models. The system accepts support tickets, processes them using AI, predicts categories and priorities, and returns structured responses through a FastAPI-based API. The project demonstrates practical applications of AI, backend development, API security, automated testing, and intelligent workflow automation in customer support systems.
